

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A color wheel apparatus, comprising:  
a color filter portion in which color filters for selectively transmitting red, green and blue colors are sequentially formed on a single circular plate in a spiral shape with respect to a rotation axis of the circular plate; and  
a driving portion for rotating the circular plate.
2. (Canceled)
3. (Previously Presented) The color wheel apparatus as claimed in claim 1, further comprising a reflective plate for reflecting a light reflected from an incident light to the color filter portion into the color filter portion again.
4. (Previously Presented) The color wheel apparatus as claimed in claim 1, wherein the reflective plate has a smaller size than the color filter portion.

5. (Currently Amended) A color-separating apparatus for a liquid crystal projector of single panel type, comprising:

a color wheel including a color filter in which red, green and blue colors are sequentially formed on a single circular plate in a spiral shape, and a reflective plate opposed to the color filter to reflect an incident light reflected and emitted from the color filter into the color filter again;

a condensing lens for focusing a color light emitted from the color wheel;

a polarizing prism for reflecting and transmitting an incident light inputted from the condensing lens in accordance with a polarized direction;

a display device for reflecting the color light reflected from the polarizing prism and being incident thereto in accordance with an image signal to implement a picture light loaded with picture information; and

a projective lens for projecting the picture light from the display device on an expanded scale.

6. (Original) The color-separating apparatus as claimed in claim 5, wherein the color filter takes a spiral shape in which red, green and blue colors are entered toward the rotation center direction.

7. (Original) The color-separating apparatus as claimed in claim 5, wherein the color filter is provided on a circular plate, and the reflective plate is provided at the rear side of the circular plate.

8. (Original) The color-separating apparatus as claimed in claim 5, wherein the reflective plate has a relatively smaller size than the color filter.

9. (Previously Presented) A color-separating apparatus for a liquid crystal projector of single panel type, comprising:

a color wheel having a color filter portion in which color filters for selectively transmitting red, green and blue lights are sequentially formed on a circular plate in concentric circles; and

a driving portion for rotating the circular plate.

10. (Previously Presented) The color-separating apparatus as claimed in claim 9, further comprising:

a reflective plate for reflecting a light reflected from an incident light to the color filter portion into the color filter portion again.

11. (Original) The color-separating apparatus as claimed in claim 9, wherein the color wheel has the red, green and blue concentric circles spaced at the same distance  $d$  (wherein  $d$  is a positive number meeting a relationship of  $d > 0$ ).

12. (Original) The color-separating apparatus as claimed in claim 9, wherein a rotation axis of the color wheel makes a non-axial rotating motion at a position spaced at the same distance  $d$  from a center axis of the concentric circles.

13. (Canceled)

14. (Original) The color-separating apparatus as claimed in claim 9, further comprising:

a condensing lens for focusing a color light emitted from the color wheel;

a polarizing prism for reflecting and transmitting an incident light inputted from the condensing lens in accordance with a polarized direction;

a display device for reflecting the color light reflected from the polarizing prism and being incident thereto in accordance with an image signal to implement a picture light loaded with picture information; and

a projective lens for projecting the picture light from the display device on an expanded scale.

15. (Original) The color-separating apparatus as claimed in claim 9, wherein the color wheel includes five color areas consisting of red, green, blue, red and green color areas to image an illuminating light on three areas of the five color areas.

16. (Previously Presented) The color wheel apparatus as claimed in claim 1, wherein a plurality of color filters are formed along a radial direction of the color filter portion, and wherein a plurality of colors are filtered in the radial direction.

17. (Previously Presented) The color wheel apparatus as claimed in claim 16, wherein the color filters simultaneously filter red, green and blue colors in a prescribed time interval.

18. (Previously Presented) The color-separating apparatus as claimed in claim 5, wherein first, second and third color filter portions form the color filter, and wherein a plurality of color filter portions exist in the color wheel sequentially positioned in a radial direction from an inner radial portion of the color wheel to an outer radial portion of the color wheel.

Serial No. 09/987,664

Docket No. YHK-0072

In reply to Office Action dated: January 8, 2004

19. (Previously Presented) The color-separating apparatus as claimed in claim 9, wherein the color filters simultaneously filter red, green and blue colors in a prescribed time interval.

20-23. (Cancelled)
